QCC5171 USB debug driver Install and update FW

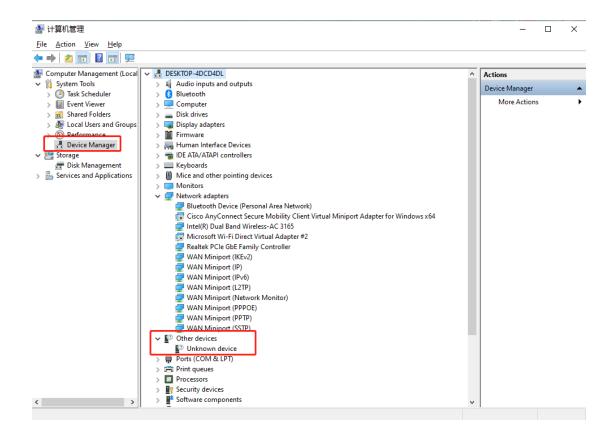

1. PC system: Win10

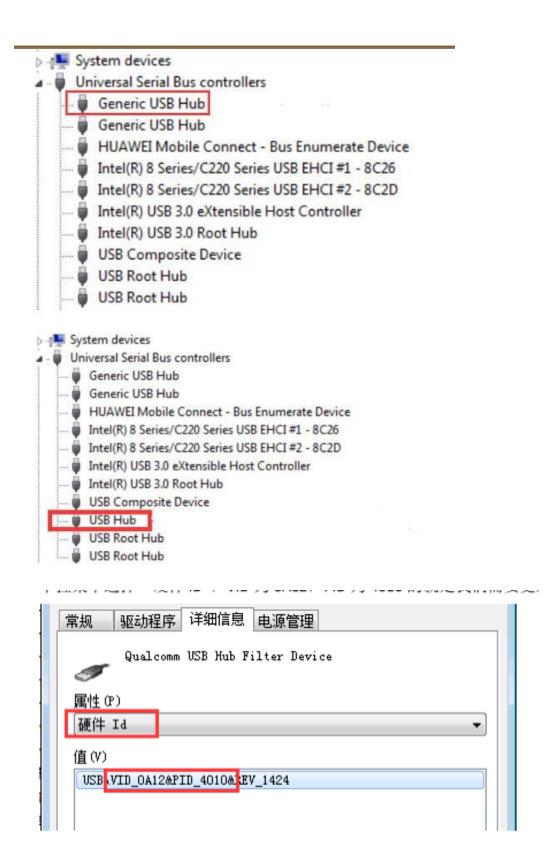

2. Install InstallBlueSuiteCda_3_3_13_1423, Click Next until finish install.

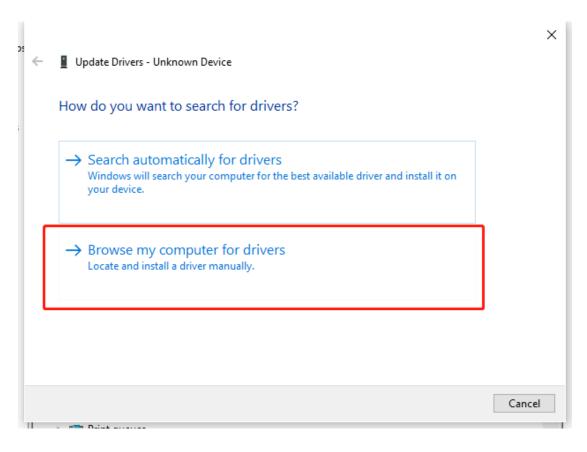

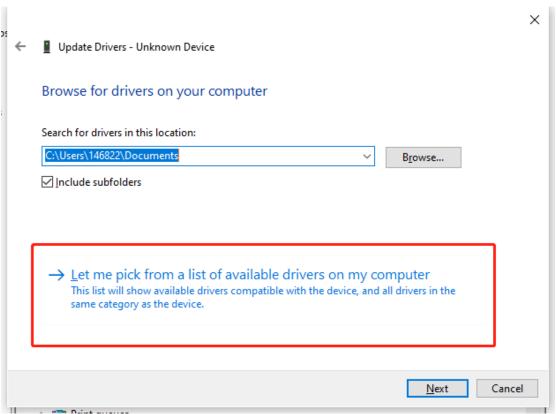

- 3. Use USB A to A cable (BT/WIFI upgrade cable) connect 4329P with PC
- 5. Power on device and open PC device manager, and run "bt upgrade enable" command in serial port to enable BT upgrade mode. You will see a new unknown device or USB hub device. If show is USB hub device, you can click detail and see USB HW ID show "VID_OA12&PID_4010" to confirm.

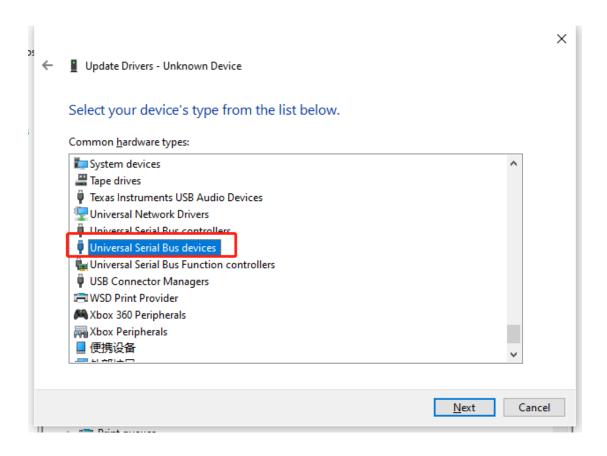

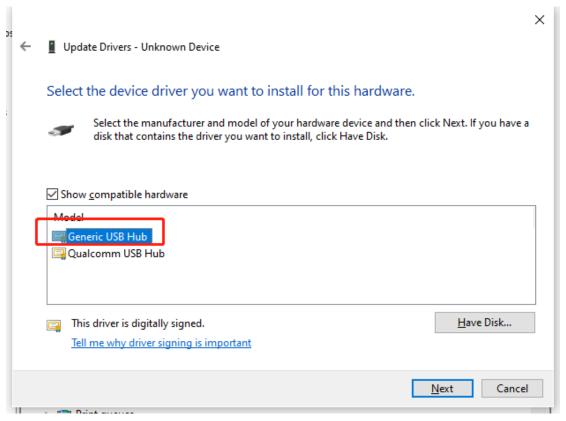

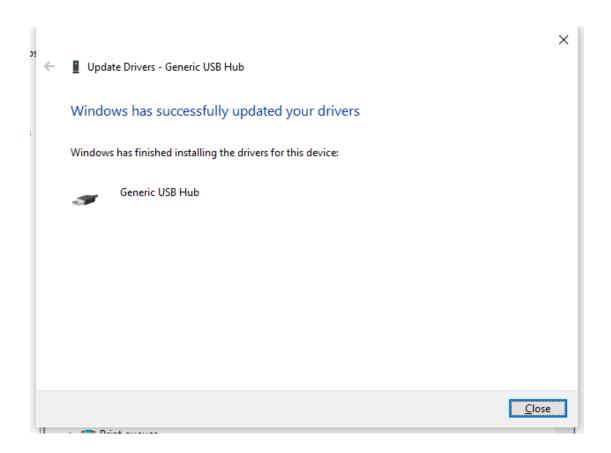

6. Right click this device and choose update driver. Follow below picture red box click to operate.

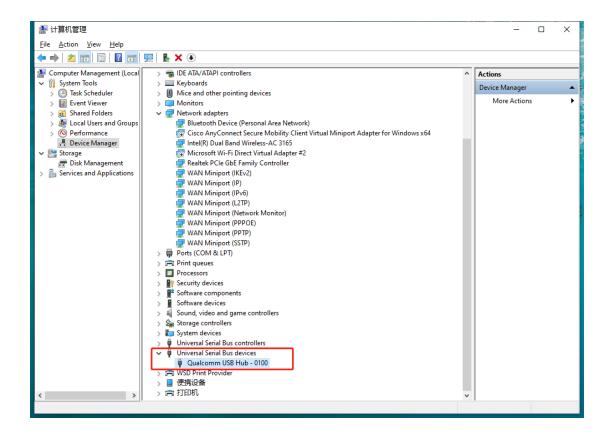

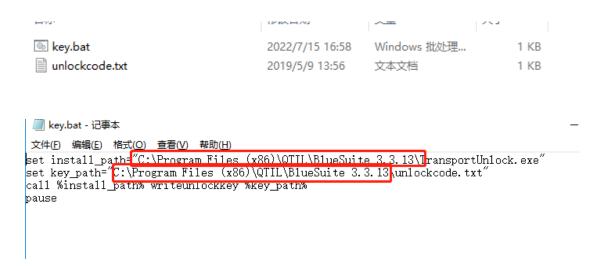

7. If driver install successful, device name show as below (Ignore suffix number 0100). If fail, please repeat step 5 until install successful.

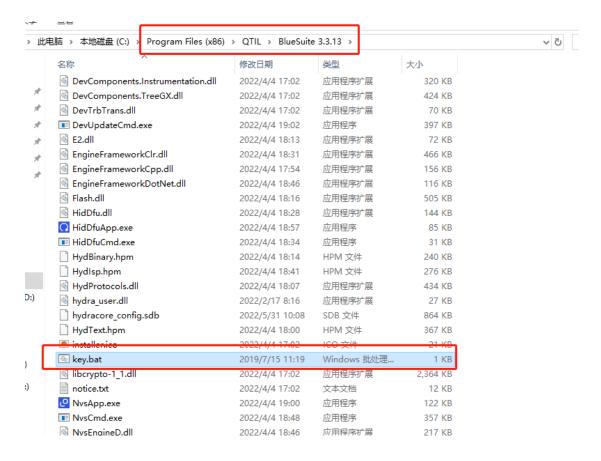

8. Register the driver:

(1) Modify key.bat, ensure the path is same as your driver install path in step 2.

(2) Copy key. bat and unlockcode. txt to driver install path in step 2

(3) Run Key. bat as administrator, check success ore not

```
C:\Windows\system32\set install_path="C:\Program Files (x86)\QTIL\BlueSuite 3.3.13\TransportUnlock.exe"

C:\Windows\system32\set key_path="C:\Program Files (x86)\QTIL\BlueSuite 3.3.13\unlockcode.txt"

C:\Windows\system32\set key_path="C:\Program Files (x86)\QTIL\BlueSuite 3.3.13\unlockcode.txt"

C:\Windows\system32\square all "C:\Program Files (x86)\QTIL\BlueSuite 3.3.13\unlockcode.txt"
